|---------------------|---------------------------------------|
| Date | 23 September 2022 |
| Team ID | PNT2022TMID49721 |
| Project Name | Retail Store Stock Inventory analysis |

| S.No. | Parameter | Description |
|--------------|--|--|
| 1. | Problem Statement (Problem to be solved) | To create a retail store stock inventory management system for retailers to meet customer demand without running out of stock or carrying excess supply. |
| 2. | Idea / Solution description | Retail store stock inventory analytics is implemented to analyse the historical sales data of a retailer. By deeply understanding the dataset, identifying pattern, relationships and connection using python libraries like pandas and using IBM Cognos analytics to build visualizations of stock inventory and to create meaningful dashboards. The final dynamic dashboard helps retailers by providing detailed product listing, easy categorization, inventory reports satisfying customer needs and meet variation in product demand. |
| 3. | Novelty / Uniqueness | This solution involves analysing the sales ratio and determining the stock availability. It indicates the retailer of out-of-stock commodities and also determine the popular products among customers. Also, it involves usage of IBM Cognos analytics tool for visualisation rather than using python libraries like matplotlib. |
| 4. | Social Impact / Customer Satisfaction | Customers will get more varieties, high availability of the products. |
| 5. | Business Model (Revenue Model) | <ol style="list-style-type: none"> 1. Improve the decision-making process oriented at reducing costs and increasing revenues. 2. Retailers are able to understand the deepest customer needs and adjust their offering to meet shoppers' demands. |

| | | |
|----|-----------------------------|---|
| 6. | Scalability of the Solution | This solution is applicable for small retail stores as well as large departmental stores. It can also analyse wide range of datasets and different types of visualisations can be done. |
